## Customer Reviews

Grade 1-4-These two beginning chapter books will whet the appetites of young scientists. Hopping introduces children to an amazing and deadly natural phenomenon. Many interesting facts about the study of lightning from the historical (Ben Franklin) to the modern (today's computer technology) are included as well as cultural connections (Zeus) and the experiences of people who have survived being struck by lightning. The watercolor illustrations include maps, diagrams, and action scenes. McNulty shares information about bats through her memories of a summer spent in a house filled with these winged creatures. Full- and double-page illustrations show various family members reacting to the animals. This combination of personal narrative and facts is one that children will find appealing and informative.Maura Bresnahan, Shawsheen School, Andover, MA

Purchased this book for my daughter who is afraid of storms. Read through it in advance, the material is full of stories of people being harmed by lightening. May be suitable and entertaining for those who want to learn more stories or about the science of lightening, but not in order to demystify and calm fears.

I thought this book was very well-illustrated for young children. The charts and tables and diagrams were easy to understand, and attracted interest in the text. This was an important book for me to read with my grandchildren because we live in New Mexico, where lightning is an almost daily event. As with the Floods book in this series, it features a female scientist and young girls in the illustrations, which really helps my granddaughters to relate to the information. The science is clear. My granddaughters really grasped the concepts, and could even use the book to observe our lightning storms. For example, the books says to close your eyes right after a lightning strike and you can see the pattern of the lightning, in miniature, on your eyelids. It really works!

The kids like all the books in this series--hurricanes, tornadoes and lightning being the favorites. They're easy to read and present the science in a very engaging and friendly way. I like the mix of personal stories and science information, especially.
