Evolve Your Brain: The Science Of Changing Your Mind

Synopsis

Joe Dispenza, DC, has spent decades studying the human mind - how it works, how it stores information, and why it perpetuates the same behavioral patterns over and over. In the acclaimed film *What the Bleep Do We Know!?*, he began to explain how the brain evolves - by learning new skills, developing the ability to concentrate in the midst of chaos, and even healing the body and the psyche. *Evolve Your Brain* presents this information in depth, while helping you take control of your mind, explaining how thoughts can create chemical reactions that keep you addicted to patterns and feelings - including ones that make you unhappy. And when you know how these bad habits are created, it's possible to not only break these patterns, but also reprogram and evolve your brain, so that new, positive, and beneficial habits can take over.
