From the Foreword: "This book was designed to provide and encourage practitionerâ™s development and use of critical drug information evaluation skills through a deeper understanding of the foundational principles of study design and statistical methods. Because guidance on how a studyâ™s limited findings should not be used is rare, practitioners must understand and evaluate for themselves the veracity and implications of the inherently limited primary literature findings they use as sources of drug information to make evidence-based decisions together with their patients. The editors organized the book into three supporting sections to meet their pedagogical goals and address practitionersâ™ needs in translating research into practice. Thanks to the editors, authors, and content of this book, you can now be more prepared than ever before for translating research into practice." L. Douglas Ried, PhD, FAPhA Editor-in-Chief Emeritus, Journal of the American Pharmacists Association Professor and Associate Dean for Academic Affairs, College of Pharmacy, University of Texas at Tyler, Tyler, Texas

## **Customer Reviews**

Great introduction to the research field. I will be keeping this for the rest of my School of Pharmacy years. It is a bit dry at times, but provides more details and better examples than you would find on Google.

Good coverage of subjects. Quizzes in end of chapters have no answer key...pure waste of time (my time) and space (wasted pages). Has online elements but I bet there is still no answer key. Could have been better.

The best and easy to understand statistics book!

Breaks down the theory and builds it up to the harder science. Should be used in college.

Easy to understand book. It's well laid out and the topics covered are gone over very well. The subject matter is a bit dry to me, but hey what can you do with a required textbook for a class?
