# Barr's The Human Nervous System: An Anatomical Viewpoint, Ninth Edition

## Synopsis

This classic, succinct, well-illustrated textbook simplifies neuroscience content to focus coverage on the essentials and helps students learn important neuroanatomical facts and definitions.

Descriptions and illustrations of the regional anatomy of the central nervous system are followed by accounts of the functional pathways. The level of treatment is suited to increasingly shorter neuroanatomy courses for medical and allied health students. The Ninth Edition features new and improved artwork, updates in current trends and terminology, and additions/updates to the Cranial Nerves chapter and Cells of the Nervous System chapter. A companion Website offers online text, more than 450 interactive multiple-choice review questions, case studies, glossary, eponyms, abbreviations, an expanded version of selected chapters, and images from the book.

## Customer Reviews

This was a required textbook for my Neuroscience courses in chiropractic school, and it suited me very well (I'd say even better than the other required textbook). Now, in undergrad I was never one to really use the textbook (the professors only ever ask questions based on things they actually say, right?), but in this case I had an amazing professor and the book was helpful in making me understand the information even better.

Great.

This text was assigned by my Neuro prof for Neuroanatomy in medical school. It is dense, hard to read through, and is not an enjoyable read by any stretch. Use this book as a reference, but for a much better read, go for Lange neuro board review book.

very dense and hard to read text. If you are a beginner in neuroanatomy this would not be a good book for you. It is more of a review instead of a primary source for learning neuroanatomy
